specialist glove suppliers since 1847

Firemaster[®] Cadet

DESCRIPTION and USE

An inseam gunn design with an inset thumb made with a PYROHIDE[®] leather outer shell, a knitted wristlet cuff and a blended KEVLAR[®] seamless knitted lining. It is not designed structural fire-fighting duties and should not be worn where there is a risk of injury through heat or flame.

LEATHER SPECIFICATIONS

PYROHIDE[®] is a world class top-grade aniline grain cowhide leather developed specifically for fire-fighters and used by 48 of

the 61 brigades in the UK. It offers resistance to fire, heat, water, salt water, liquid chemicals (sulphuric acid, hydrochloric acid, caustic soda, ethanol etc) and Man Made Mineral Fibers (MMMFs). It is highly tactile in wet and dry conditions and dries soft following normal use. Manufactured in the UK by Southcombe Brothers using a proprietary formula, it is exclusive to Southcombe Brothers.

LINING

Seamless knitted KEVLAR[®] with glass-fibre core providing high levels of abrasion resistance and un-paralleled levels of cut/slash resistance. The lining is plated with a Viloft[™] yarn to wick moisture away from the hand.

CUFF

A tubular 2 x 1 rib knitted double wristlet cuff in acrylic

THREAD

Sewn throughout in cotton thread.

- PYROHIDE[®] leather shell—the No. 1 choice for UK fire-fighters (supplied to 48 of UK's 61 brigades)
